

Ethercare

WHITE PAPER

VISION

“ Together make Ethercare as tokens that have value and have competitiveness in the future ”

MISSION

1. Expand network of members in national scale
2. make agendas of national meeting
3. Make member of the Ethercare community as part of the development of the Ethercare Token
4. Prioritizing cooperation among members in achieving common goals
5. Whole member community work together to manifest the vision

INTRODUCTION

We know that the development of e-commerce and fintech (financial technology) these recent years increased significantly, it shows that people are now starting to open to internet technology. For new companies, this can be very positive, because it will be easier to offer a product / the services they offer. And for old companies that don't have creative ideas, new innovations, of course, will be displaced by new companies that offer a new technology, which is easier to use, easy to access, and flexible.

One factor in the development of fintech is the millennial generation. The desire to get more facilities and easy access to many things in the online world is the main reason for them. In fact, sometimes they don't think about how much to pay, as long as their needs are met. The new profession in the recent years has become a conversation in the general public, which is even anti-stream like dropshippers, youtubers, content creators, startup pioneer, etc. Those entire efforts are positive things that are utilized for those who are creative.

For business actors, of course there are lots of things that can be utilized to achieve the money targets. But for those who have creative ideas, sometimes they have to give up hope because of lack of financial matters, skill etc. One of the factors supporting the success of a fintech product / e-commerce is a community. With a community we will be easier to advertise, network development, easy to get sponsors from large investors and many other positive things.

The current fintech development is on the rise due to the existence of a technology called blockchain, of which this technology is open, permanent and decentralized. It will certainly be safer to use compared to conventional fintech technology, which is centralized. The application of blockchain technology was first used for the BITCOIN digital currency (cryptocurrency) in 2009 by Satoshi Nakamoto. It is growing rapidly until now and there are even thousands of alternative coins listed at coinmarketcap.com.

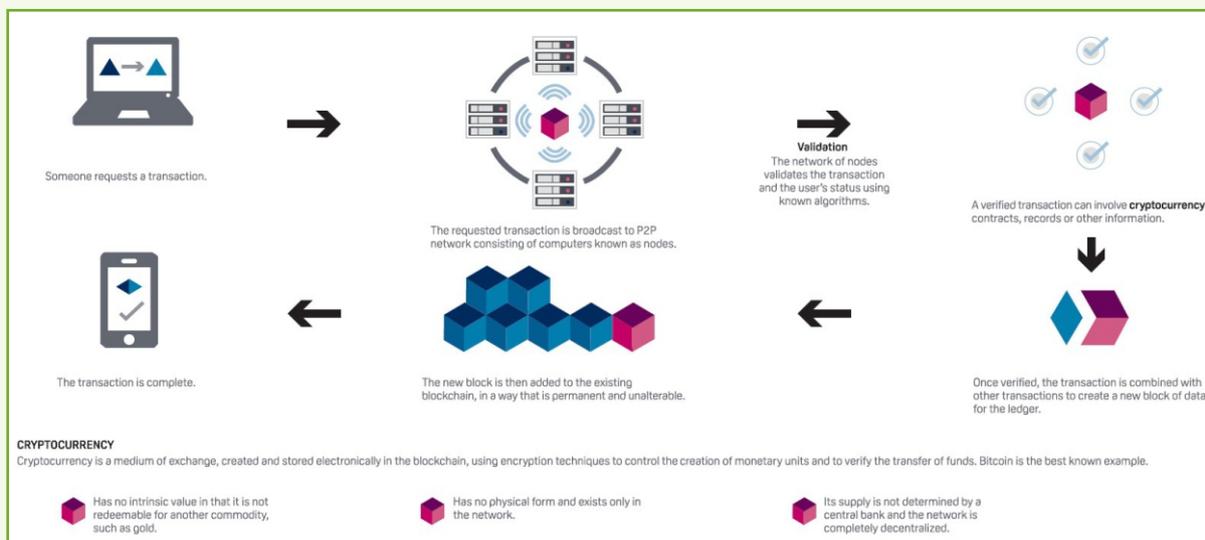

The average of new token/cryptocurrency coins usually exhibit an Initial Coin Offering (ICO), to get funding, and development for their tokens. But the ease of getting investment from the ICO today is used by many cryptocurrency players to get easy money without clear and sensible project so there are many projects experiencing failures, and finally made the investors traumatic. We have come to provide solutions to the concerns of investors, with real supply and demand, and without crowdfunding/fundraising through an Initial Coin Offering (ICO).

BLOCKCHAIN & CRYPTOCURRENCY

It is a ledger or data storage media that is permanent and decentralized. All data will be stored in a block that is connected to each other, or also called peer to peer.

Cryptocurrency is a digital currency or online payment tool who uses the blockchain system. It is decentralized, which means that it is in general clearly safer than the one with centralized system.

PROBLEM

As the number of blockchain system enthusiasts increases, there are many cryptocurrency actors who make their own tokens, as well as do crowdfunding. Some are successful, but there are many who fail. Even the comparison between success and failure reaches 90: 10. The figure is very alarming. This failure can be caused by many factors. Among others are:

1. Many tokens developers get money from crowdfunding, but they do not run the supposed roadmap. Finally the project did not develop and even fail.
2. The number of tokens made for the purpose of personal profit.
3. Price of a token that does not match supply and demand.
4. There is no definite purpose why coins / tokens were created.

The various problems above are examples of problems that have occurred in the world Of cryptocurrency.

ETHECARE TOKEN

Ethercare is a token built under the ethereum ERC20 line based blockchain. Ethercare was created for forming an ecosystem that is put together in the a communities where from there every member could exchange information and help each other in internal matter and external community. Along with the existence of a solid community, Ethercare tokens will be more known by people that later will bring positive impact for the member of Ethercare Community as the holder.

Ethercare is present without the execution of crowdfunding or Initial Coin Offering (ICO). Naturally, the risk of losing money due to a project failure or the existence of fraudulent developers is almost nothing or 0% RISK. With Ethercare community we are hoping for a positive change for the community and also for the cryptocurrency actors. Even without crowdfunding or ICO, with a concept governed by Ethercare management, we believe the value tokens will be formed naturally in the future. We certainly do not understand that in the Ethercare community there is a contribution from other parties in the development of Ethercare, be it in advertising, capital and other expertise. This is because we also won't be able to run well without the support of the Ethercare community.

TOKEN DETAIL

Contract address :
0x6265bcd2ca8e8ee77cb9a9c66a851f18216022e

Name:
ETHECARE

Symbol:
ETCR

Decimal:
6

Total Supply:
666.666.666 ETCR

ETHECARE PROJECT

We will focus on the development of the real number of members with a target of 100,000 members. We will also contribute to the development of startup, e-commerce, content creator and other online businesses and conventional businesses. That way, Ethercare that initially does not have value will gradually have one and slowly the Ethercare community will also experience the benefit by helping each other's community. The holder of Ethercare Token will also feel the benefits.

We will apply modern website development, with interesting and unprecedented facilities for the convenience of the Ethercare community. Public facilities such as chat rooms, video streaming, advertising, marketplace and many other things will be obtained in the Ethercare community. With the stages that Ethercare management applies, we are sure to bring a positive community in the future.

Of course this project can run perfectly if all members in the Ethercare community play a role in the development of Ethercare.

ROADMAP

Q1

MAKE THE ETHERCARE COMMUNITY CORE TEAM

Q2

DESIGN THE TOKEN CONCEPT

Q3

BUILD ETHERCARE TOKEN

Q4

TOKEN DISTRIBUTION TO OUR COMMUNITY MEMBER

Q5

LAUNCH WEBSITE

Q6

LISTED ON EXCHANGE

Q7

INITIAL EXCHANGE OFFERING

Q8

DISCLAIMER 1

Joining the Ethercare community means you will obey the rules imposed by the management. By joining the Ethercare community means you will participate actively participate in the development of programs made by management for mutual purposes. The whole community is in full consciousness, and without coercion in joining or investing. The entire Ethercare community must contribute fully for the future of Ethercare. Ethercare never promises profits or abundant benefits from the purchase of Ethercare tokens. The entire community is aware and will follow the long process that Ethercare management takes to achieve mutual success. The entire Ethercare community realizes that the success in working together with various merchants takes time and supportive community.

DISCLAIMER 2

Cryptocurrency is a high-risk investment and may not be suitable for all community members and all types of investors. Before buying crypto currencies, you must ensure that the nature, complexity and risks inherent in crypto currency trading are suitable for your purpose in considering your circumstances and financial position. You do not have to buy crypto currency unless you understand the extent of your exposure to potential losses.

The Cryptocurrency exchange rate has shown strong volatility to date and you understand that the potential loss exposure rate can extend to all of your cryptocurrency investments.

Many factors outside the control of Ethercare will affect cryptocurrency market prices, including, but not limited to, national and international economics, finance, regulations, politics, terrorists, the military, and other events, bad and positive news events and publicity, and generally extreme, uncertain, and turbulent market conditions. Extreme price changes can occur at any time, resulting in the potential to lose the value of all of your investment in cryptocurrency, losing some or all of your purchasing power, and total difficulties or inability to sell or exchange your digital currency. Ethercare has no obligation to buy or mediate the repurchase of your cryptocurrency in circumstances where there is no viable market for the same purchase. Investing in Ethercare can cause loss of money in the short or even long term. Bitcoin investors should expect prices to have large range fluctuations. Information published on the Website cannot guarantee that investors in Ethercare will not lose money.
